## In-Office Medication Dispensing Program

In a recent study of 1,023 US adults, three out of four would prefer to fill their prescriptions at the point-of-care instead of at a pharmacy. More than half (62%) stated that such a service would help them better manage their health.

UCAOA recently reported that nearly half of Urgent Care centers nationally are currently dispensing, making it one of the most proven and adopted ancillary activities at Urgent Care centers. This can improve the patient experience while increasing your revenue. The ASM program will save your patients time and enhance your urgent care facility.

ASM offers competitive pricing so you can help your patients save money on their prescriptions. Because most of our medications can be priced at or below the typical insurance co-pay, this program is also affordable for uninsured patients.

Our program will positively impact your revenue streams by attracting new patients, providing time-saving tools for you and your staff and increasing the overall efficiency of your center.

- **Increased Patient Compliance**
- **Improved Patient Satisfaction**
- **Additional Revenue**

*Contact ASM today to discover why over 50% of all Urgent Care clinics nationally have adopted a dispensing program to improve patient experience while bringing additional revenue to their practice!*
