## Web-Based Medication Dispensing Management System
HENRY SCHEIN®
MEDICAL

Increase productivity and ensure medication safety with the most complete and efficient in-office dispensing solution available.

PedigreeRx provides point-of-care dispensing of prepackaged medications. Applying innovative technology, PedigreeRx enables physicians and approved staff members to give medications quickly and safely to patients at the point-of-care.

PedigreeRx delivers maximum flexibility to meet your dispensing needs. Utilizing bar-code technology, PedigreeRx verifies the medication for each bottle dispensed. Once verified, a patient-specific label and education sheet are created. PedigreeRx provides complete tracking of inventory, as well as data associated with dispensing, including physician and patient names, medication and dispensing facility.

1 Select the provider, patient and medication

2 Remove bottle, stored in the convenient dispensing cartridge

3 Scan the bar-code on the medication bottle, which is verified against real-time inventory

4 Print medication label and patient education sheet, available in English or Spanish

5 Apply patient-specific label and dispense

- Track patient utilization and dispensing history
- Complete real-time inventory management
- Manage multiple sites / inventories
- Real time reporting
- Insurance adjudication
- Third party billing access
- Re-order alerts based on preset min-max inventory controls
- Delivery notification with automated inventory population upon confirmation
- Fully secured and HIPAA compliant
- EHR management system connectivity
