

REDEFINING DIABETES CARE

TRANSFORMING DIABETES PATIENT AND POPULATION MANAGEMENT

Glucome's Digital Diabetes Clinic (DDC) is a diabetes-specialized, cloud-based virtual clinic for healthcare professionals. Providing personalized and effective insights, prioritization and guided management of remote patient populations, the DCC sets a new standard in digital diabetes care.

Glucome's DDC continuously collects accurate patient data from Glucome's Mobile App from any smartphone. The DDC transforms this data into unrivaled big data insights which are then intuitively presented in digestible patient and population views for timely clinical decision-making. The DDC's prioritization capabilities, insights, notifications and reminders enable effective and efficient digital or face-to-face interventions, so that physicians, healthcare providers, payers and insurers can streamline care and management without compromise, while saving time and reducing costs.

LARGE-SCALE PERSONALIZED DIABETES POPULATION MANAGEMENT

GlucoMe's DDC optimizes diabetes care for patients, clinics and payers. When it comes to data, the DDC does the heavy lifting. It utilizes proprietary system capabilities, running advanced queries and data mining, to give care providers actionable insights and personalized management tools to better care for their patients. By analyzing captured patterns and plausible causes for clinical events, GlucoMe ushers in a new level of diabetes management.

Timely Insights for Rapid Decision-Making

Blood glucose data, gathered directly from patient smartphones via GlucoMe's mobile app, is presented for patient care teams, together with analyses of adherence and trends – all in one place, on one screen. Patient population notifications along with clinic and patient group management tools deliver quick situation analyses of true patient behavior patterns and enable clinical teams to respond rapidly with treatment plans for individual-level patient compliance.

CONTROL TOWER

A New Standard in Population Management, Care Prioritization and Communication

At the heart of the DDC is GlucoMe's Control Tower suite, empowering the medical team by screening the entire clinic population while highlighting only those patients requiring specific intervention at any given time. Easy-to-follow snapshots of each patient file also single out the critical events. Automated digital visits and instant chat communications enhance direct and specific clinic-patient interaction and management.

THE DDC'S FOCUSED AND PRIORITIZED CARE APPROACH EMPOWERS MEDICAL TEAMS WHILE SAVING VALUABLE TIME AND LOWERING OVERALL COSTS.

**FDA-REGISTERED
CE-CLEARED**

COMPLIES
with diabetes guidelines
(ADA/EASD)

STRONG OUTCOMES
74% reached post-prandial
blood glucose targets*

OPEN PLATFORM
integrates with 3rd-party
EMRs, BGMs & systems

* Case study was conducted in India in conjunction with Apollo Sugar, part of the Apollo Hospital Group.

GlucoMeTM
Diabetes Care Made **Simple.**

GlucoseMe is providing a true end-to-end digital diabetes management solution that fully connects healthcare providers with patients for effective and efficient control and remote care of diabetes populations.
