MicroMD e-Prescribing
Automate your Prescription Workflow

No Longer do You Need a Full EMR System to Order Prescriptions

MicroMD e-Prescribing is a standalone eRx only software that doesn't require an EMR system to operate. Available as a cloud or server solution, it is simple to use and provides advanced features to more familiar capabilities like instant prescription routing and streamlined refill management.

Integrated Eligibility Verification

Easily access your patient's prescription coverage details. For scheduled appointments and prescription requests, MicroMD e-Prescribing automatically retrieves the patient's prescription eligibility information and presents it to the provider at the point of care.

Comprehensive Medication History

Review a list of the medications that other providers in the community have prescribed for your patient. MicroMD e-Prescribing gives you a comprehensive view of all medications, regardless of the prescriber. In line with the EHR Incentive Program requirements MicroMD e-Prescribing provides Medication Reconciliation functionality to assist practices in adding existing prescription records to the patient's chart. Once prescription records are received (via Surescripts), MicroMD e-Prescribing identifies prescriptions that are not present in the patient's chart, and allows "single-click" entry of those medications, easily reconciling medication records.

Formulary Checking

Select the most affordable options and enhance adherence to drug treatment by accessing patients' drug formulary data as a routine, integrated option while writing the prescription. Utilizing a secure and live connection with Surescripts®, the country's largest electronic prescribing network, MicroMD e-Prescribing gathers the necessary prescription coverage information to determine what the patient can expect to pay for the specific medication and, if necessary, identify alternatives.

Henry Schein MicroMD is a 2020 Surescripts White Coat Award recipient in the Tier 2 Highest Accuracy category.

Drug Warnings and Information

Use the system as a clinical decision support resource. At the time of prescription writing, MicroMD e-Prescribing automatically reviews the medical record for potential allergic reactions and checks current medication guidelines, from First DataBank®, for possible harmful combinations.

Patient Education Resources

Improve the patient experience with on-demand patient education materials directly from MicroMD e-Prescribing. Print instructions, explanations about possible side effects, and other medication-related information, all written with minimal jargon and difficult-to-understand terminology.

Electronic Delivery of Prescriptions

Transmit your prescription instantly, through the Surescripts network, to more than 95 percent of all U.S. retail pharmacies. The prescription will be ready when the patient arrives at the pharmacy. The Surescripts network also accommodates 5010 coding and claim checking, as well as verification of patient-paid prescriptions.

Electronic Refill Management

Reduce the number of phone calls and faxes related to the refill authorization. Whether from the patient or pharmacy, physicians or authorized providers use MicroMD e-Prescribing to return approvals or denials in seconds.

Take the Pain Out of Prior Authorizations

Real-time electronic prior authorizations (ePA) are built into the e-Prescribing workflow and presents physicians with patient and health plan-specific questions automatically. Physicians get a real-time prior authorization response before the patient leaves the office, pharmacists get fill-ready prescriptions they can dispense and patients can pick up prescriptions without delay.

Real-time Prescription Benefit

Real-time prescription benefit allows you to view medication costs and therapeutic alternatives in real time at the point of care all from your MicroMD e-Prescribing workflow. You'll have cost, source and supply options at your fingertips from the very first conversation, letting you offer patients a transparent view into price implications.

Additional Solutions for Your eRx Workflow

Prescribe controlled substances and access your state's Prescription Drug Monitoring Program (PDMP) data to complement and add value to your standalone e-Prescribing software.

EPCS

Enables prescribers to legally write prescriptions for Schedule II -V drugs in every state of the U.S. to retail or mail order pharmacies electronically, easily, and seamlessly.

Scheduling Software Integration

Looking to streamline your prescription workflow even further? We can integrate with your current patient management or scheduling software to pull in patient demographics that are required to avoid double data entry.

PDMP

These programs collect, monitor, and analyze prescriptions submitted electronically to verify that a patient is not performing doctor shopping due to an opioid addiction. There is no disruption to your workflow, and it allows you to identify drug seeking behavior.

Additional Logins for Staff

These programs collect, monitor, and analyze prescriptions submitted electronically to verify that a patient is not performing doctor shopping due to an opioid addiction. There is no disruption to your workflow, and it allows you to identify drug seeking behavior.
