

Managing the care of your chronically ill patients is essential, and Medpod's Remote Patient Monitoring is designed to ease cost and time burdens so that you can provide anytime, anywhere chronic care. Medpod RPM is a component of our teleradiologic platform that allows you to scale from video visits to level 5 billable teleradiologic encounters.

Medpod RPM is fully integrated into our platform, offering disease state kits with telemedicine capabilities, patient/provider video consultations, a patient app with virtual check ins, and a provider dashboard that provides alerts when a patient's condition needs your attention, making sure you don't miss a thing.
