The Visual Consult expands your impact at the point-of-care. Throughout the continuum of care – from the waiting area to the physician office to inpatient rooms and telehealth applications – we can help your healthcare organization improve patient care delivery. Every patient-facing device should have the Visual Consult loaded so that your clinicians have at their fingertips the tools to explain complex procedures and complex disease states.

By giving patients the tools to better understand why they are under treatment and what will happen to them, they become better patients. With the Visual Consult their understanding of their condition increases, they follow directions, engage in a meaningful informed consent process, and can share this rich content with their loved ones.

## The Visual Consult is designed to augment and enhance your existing educational content.

### Where:

- › Physician's office
- › Ambulatory surgery
- › Inpatient
- › Telehealth and virtual consults
- › Rehabilitation
- › Anywhere a computer faces a patient

### Why:

- › Saves you time
- › Customize instruction in your language
- › Enhances informed consent
- › Allows them to see it so they can do it
- › Fits into the clinician's workflow
