Solving the Healthcare Problem of our Generation

We believe that the prevalence of cardiometabolic conditions—and the costs associated with them—is the healthcare problem of our generation, and we aim to solve it. Rimidi is a cloud-based software platform that enables personalized management of chronic, cardiometabolic conditions across populations, with specific platforms to address diabetes, heart failure, and fatty liver disease.

Diabetes

Rimidi: Time for Better

Tech-driven Clinical Efficiency
Rimidi aggregates patient data from the EHR and connected devices, and works directly within the EHR using SMART on FHIR standards – no additional sign-in needed.

Remote Monitoring & Communication
Armed with a more complete picture of their patients' health, clinicians are able to offer care across the continuum. Rimidi also enables remote patient-provider communication and prompts clinical action when necessary.

Achieving the Quadruple Aim
Created with a physician's lens, Rimidi builds on the triple aim of achieving better patient outcomes, lower costs, and improved patient experience by adding the crucial aspect of improved provider satisfaction.

"I want clinicians to be the superstars they trained to be, not constrained by siloed data and systems that weren't designed to optimize patient care."

Lucienne Ide, M.D., Ph.D. | Founder & Chair, Rimidi
